Thermostat for refrigerators and freezers

Description

Electromechanical thermostat 077B is used to control the temperature in refrigerators, upright and chest freezers, liquid coolers, bottle coolers and small commercial refrigeration appliances. The thermostat can be used as an evaporator thermostat or a room thermostat.

The thermostats are available with normal function, fixed cut-in and cut-out temperature, constant or variable cut-in temperature for automatic defrost, and with a push button for semi-automatic defrost. All thermostats have NC (Normally closed) main contacts; i.e. they cut out the compressor current circuit on decreasing temperature.

077B thermostats are available as a standard thermostat range, as a service kit range and as customer specified versions adapted to specific appliances. Service kit thermostats are created with specifications and accessories that allow universal application in the aftermarket, for thermostat servicing on all types of refrigeration and freezing appliances.

Features & Benefits

- Product identification data laser printed on product
 - Easy and lasting product identification
- NC (Normally Closed) main contacts
 - Cut-out of compressor on falling temperatures
- Terminals with spade connectors 6.3 x 0.8 mm, 4.8 x 0.8 mm or combinations
 - Fits into the majority of household and light commercial refrigerators and freezers
- Electrical loads of 6/36 A or 8/40 A (FLA/LRA), designed for a minimum of 300.000 cycles at full load
 - Reliable and lasting switching function
- Service thermostat code no. delivered in Multipack
 - Service thermostats include relevant accessories and installation guides

Applications

Thermostat 077B is used to control the temperature in refrigerators, upright and chest freezers, liquid coolers, bottle coolers and small commercial refrigeration appliances.

The thermostat can be used as an evaporator thermostat or a room thermostat.

The Service Thermostat version have a wider regulating range than standard thermostats, and are optimized for servicing on all refrigerating and freezing appliances independent of the make of thermostats.

077B thermostats are available with normal function, fixed cut-in and cut-out temperature, constant or variable cut- in temperature for automatic defrost, and with a pushbutton for semi-automatic defrost.

The thermostats can be supplied with the following supplementary functions:

- Auxiliary contact
- Change-over contact
- Signal contact
- Signal contact + series contact
- Signal contact + super freeze-function and indication of same
- Enclosed Brake Device contacts for appliances charged with flammable refrigerants
- Low torque spindle stop turn

Packing format definitions

- Single pack contains 1 item.
- Multipack contains several items, individually packed, so that customers can purchase 1 item and receive all relevant documentation.
- Industrial pack contains several items that are not individually packed. Industrial packs cannot be broken down, and will only contain documentation on pack level, not on item level.
- Pallet pack contains several items on a pallet.

Functions

Thermostat function

The thermostat regulates by cutting off or cutting in current to the compressor. Depending on the temperature registered by the thermostat sensor, the thermostat controls the compressor by powering it (cut-in) or depowering it (cut-off). The thermostat can be used either as an evaporator thermostat or a room thermostat.

All normal function thermostats have a cut-out temperature range and a cut-in temperature range. The differential is defined as the difference between cut-in and cut-out temperatures. However, the temperature settings of fixed function thermostats are non-adjustable.

Figure: Cut-in, cut-out and differential for normal thermostats

On thermostats with constant cut-in temperature, B6 type, the terms “differential” and “cut-in temperature range” do not apply. The only relevant terms are “cut-out temperature range” and “temperature interval”.

Figure: Cut-out and temperature interval for thermostats with constant cut-in temperature

Function and operation mode

The description covers the 077B types used as Service thermostats. Function and operation modes for the entire portfolio are described in the data sheet "Thermostats for refrigerators and freezers, 077B"

Table: Function and operation mode B0, B02 and B04 versions

Function	Operation mode	Type	Description
		B0	Without extra functionality
		B02	With auxiliary contact Note: Can't be used in combination with low torque cam.
		B02	With auxiliary contact
		B04	With changeover contact

Table: Function and operation mode B045 and B025 versions

Function	Operation mode	Type	Description
		B045	With fixed setting
		B025	With fixed setting with changeover contact

Table: Function and operation mode B20, B25, B26 and B3 versions

Function	Operation mode	Type	Description
		B20	With signal contact that cuts in on rising temperature
		B25	With serial stop contact and signal contact, cutting in on rising temperature
		B26	With contact for indication of super function and signal contact, cutting in on rising temperature
		B3	With signal contact, cutting out on rising temperature.

Function	Operation mode	Type	Description
		B5	With large differential and defrost
		B52	With large differential, automatic defrost and auxiliary contact
		B52	With large differential, automatic defrost and auxiliary contact
		B53	With large differential, automatic defrost and changeover contact

Table: Function and operation mode B6, B62 and B63 versions

Electrical specifications

The series contact cuts out when the spindle is turned to position "stop". Both the main and signal contacts are cut out. The series contact withstands a max. load of 6/36 A or 8/40 A (FLA/LRA).

The auxiliary contact cuts out when the spindle is turned to position "stop". The auxiliary contact can be used to cut out a heating element, for example, also in line with the main switch. The contact withstands 6/36 A 240 V AC / 50 Hz or 8/40 A 240 V AC / 50 Hz.

The signal contact is used to set off an alarm (audible or visual) when the sensor temperature exceeds 3 – 5 °C of the cut-in one. The signal contact withstands a max. load of 0.1 A NI (Resistive).

The reversing switch (changeover contact) is mainly used to control 3/2-way solenoid valves in dual temperature cabinets. The changeover contact withstands a max. load of 0.5 A NI (resistive) or 0.1 A (inductive).

The super function contact cuts in when the spindle is turned to position "super". The compressor runtime is consequently unlimited. The super function contact withstands a max. load of 0.1 A NI (resistive).

Table: Relay contact configuration

Relay contacts	Functions	Type	Contact rating for Europe (250 V)	Contact rating for USA (240 V)
3-4	Main contact	B0, B02, B025, B04, B045, B2, B24, B25, B26, B3, B34, BB4, B5, B52, B53, B6, B62, B63	6 (6) A	FLA:6. RLA: 36
3-6	Auxiliary contact	B02, B52, B62	6 (6) A	FLA:6. RLA: 36
3-6	Signal contact	B2, B24, B25, B26	0.1 A	FLA:0.1. RLA: NI (Resistive)
3-6	Changeover contact	B025, B04, B53, B63	0.5 (0.1) A	FLA:0.1. RLA: 0.6
3-8	Super freezer contact	B26	0.1 A	FLA:0.1. RLA: NI (Resistive)
3-8	Series contact	B25	6 (6) A	FLA:6. RLA: 36

Note: Relay contact ratings are the same for all thermostats in 077B series, including Service thermostats.

Certificates, declarations and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

When you click on the link you will be directed to the latest version of the 'Declaration of Conformity'. Products developed and sold before this date of issue conform to the directives/standards in force at the time of their sale.
